

Catch-Up Swaps

How to record and manage catch-up swaps in the admin dashboard

What is a catch-up swap?

Sometimes a customer can't make their usual class one week - perhaps they're on holiday or have a one-off clash. If there's space in a different block's session that week, they can ask to attend that instead. You record this in the admin dashboard as a catch-up swap.

Their original booking stays in place - their usual spot is not freed up for anyone else. They're simply visiting another class for that one session.

The rules

- A customer can have a maximum of 2 catch-up swaps per block they're enrolled on. For example, if someone is on the Monday block, they can swap 2 of those Mondays to another block - but not a third.
- A swap can only be recorded if the target session has spare capacity. If that class is already full, the system will block it and show an error.
- The customer's original spot is kept. The Monday session they're missing does not free up a space on that block.

Example: Sarah is on the Monday block (6 spaces, 5 booked). She's away one Monday and asks to join a Wednesday session instead. The Wednesday block has 3 out of 6 spaces filled, so there's room. You record a catch-up swap: source = Monday block, target = Wednesday block, date = the Wednesday she'll attend. Monday stays at 5 booked. Wednesday's regular bookings stay at 3, but the By Class view will show Sarah as a catch-up visitor for that session.

How to record a catch-up swap

1. Go to Catch-up swaps in the left-hand sidebar of the admin dashboard.
2. Click + Record swap (top right).
3. Select the customer from the dropdown.
4. Select their source block - the block they normally attend (the one they're missing).
5. Select the target block - the class they want to attend instead.
6. Select the date of the session they'll attend. Only future dates are shown.
7. Optionally add a note (e.g. holiday, family commitment).
8. Click Save.

If the save is blocked, the system will show an error message explaining why - either the session is full or the customer has already used their 2 swaps on that block. Nothing is saved in either case.

How to remove a catch-up swap

On the Catch-up swaps page, find the swap in the list and click Remove. You'll be asked to confirm. Once removed, the swap is deleted immediately.

Catch-up visitors in the By Class view

When you open By Class in the admin sidebar and expand a class group, you'll see the regular bookings list as normal. Below it, there's a Catch-Up Visitors section showing anyone who is attending that session as a swap from another block, including the date they're visiting and any notes you added.

If the total number of people attending a session (regular bookings + catch-up visitors) exceeds the class capacity, a warning is shown in orange. This flags it so you're aware, but does not block anything - the system trusts your judgement.

Quick reference

Maximum swaps per customer per block	2
Can swap to a full session?	No - system blocks it
Does the original booking stay?	Yes
Who can record swaps?	Admin only (Louise)
Can customers record their own swaps?	No
